WAVE Technology

Putting control back in the hands of the user, WAVE technology offers hygienic touchless operation on command. Activating only when a hand is waved directly over the flushometer, the sensor eliminates random flushing that can be frightening for children and frustrating for all users. And by removing false actuations, WAVE technology provides even greater water savings.

- Piston valve is built to last and cycle tested to 500,000 flushes—twice industry standards
- Every valve undergoes a dozen rigorous tests, ensuring WAVE will hold up in the most extreme environments
- WAVE eliminates false flushes—resulting in water savings—and combines the control of a manual flushometer with the hygiene of a touchless flushometer
